VISION AND MISSION STATEMENTS

Vision Statement
The vision of the Office of Small Business Programs (OSBP) at NASA Headquarters is to promote and integrate all small businesses into the competitive base of contractors that pioneer the future of space exploration, scientific discovery, and aeronautics research.

Mission Statement
Our mission in the Office of Small Business Programs is to:

- ensure that the Agency is compliant with all Federal laws, regulations, and policies regarding small and disadvantaged business utilization; and
- provide expertise on the utilization of all categories of innovative small businesses, including minority serving institutions that can deliver technical solutions in support of NASA.

LIST OF CORE FUNCTIONS

- **Advocacy**: Advise the Administrator on all matters related to small business.
- **Promote Small Business**: Develop and manage NASA programs that assist all small business categories and communities.
- **Small Business Focused Government Contracting**: Develop small businesses in high-tech areas that include technology transfer and commercialization of technology and maximize the number of practicable opportunities for small business participation in NASA prime contracts and subcontracts.
- **Entrepreneurial Development**: OSBP and NASA Centers provide individual face-to-face and Internet counseling for small businesses throughout the United States and in U.S. territories.

Visit [http://www.osbp.nasa.gov](http://www.osbp.nasa.gov) for more information on NASA’s Office of Small Business Programs and how to do business with NASA.

2. After spending nearly a month tending to the International Space Station’s first crop of Chinese cabbage, astronaut Peggy Whitson harvested the leafy greens on Feb. 17, 2017. (NASA)
3. In a lab at NASA’s Johnson Space Center in Houston, engineers simulated conditions that astronauts in space suits would experience when the Orion spacecraft is vibrating during launch (NASA/Rad Sinya)
4. NASA Glenn engineer Dr. Peter Peterson prepares a high-power Hall thruster for ground testing in a vacuum chamber that simulates the environment in space. (NASA)
LETTER FROM THE
ASSOCIATE ADMINISTRATOR

The purpose of this guide is to provide a window into which North American Industry Classification System (NAICS) codes have received the most contract dollars at each NASA Center during the previous fiscal year. Please keep in mind that the NAICS codes labeled herein only represent funds currently being obligated to contracts, whether these contracts are new or are in subsequent funding years. There is no guarantee that the Centers will be issuing solicitations on contracts in these NAICS codes in the upcoming year. Also, some NAICS codes listed herein are associated with contracts awarded prior to 2007. Some of these NAICS codes were revised in 2007 and are no longer valid.

For further information please visit Federal Business Opportunities at http://www.fbo.gov, which will allow the creation of tailored searches for opportunities aligned with your company’s capabilities.

Glenn A. Delgado
Associate Administrator
NASA Office of Small Business Programs
AMES RESEARCH CENTER

Ames Research Center (ARC), located in California’s Silicon Valley, is a leader in information technology research with a focus on supercomputing, networking, and intelligent systems. ARC conducts the critical research and development that creates the enabling technologies that make NASA missions possible. Ames is also a leader in nanotechnology, fundamental space biology, biotechnology, aerospace and thermal protection systems, and human factors research. Ames research in astrobiology focuses on the effects of gravity on living things and the nature and distribution of stars, planets, and life in the universe. In addition, ARC works collaboratively with the Federal Aviation Administration (FAA), conducting research in air-traffic management to make safer, cheaper, and more efficient air travel a reality. Ames engages in information and education outreach, forms collaborative partnerships, and fosters commercial application of NASA technologies. Ames is developing NASA Research Park, an integrated, dynamic Research and education community created to cultivate diverse partnerships with academia, industry, and nonprofit organizations in support of NASA’s mission.

ARMSTRONG FLIGHT RESEARCH CENTER

The Armstrong Flight Research Center (AFRC) is advancing aerospace technology and environmental and space science through atmospheric flight. Located at Edwards Air Force Base in California, AFRC conducts flight Research and technology integration to revolutionize aviation and pioneer aerospace technology. The Center also supports operations of the International Space Station for NASA. From its satellite Armstrong Aircraft Operations Facility in nearby Palmdale, CA, AFRC conducts airborne remote sensing and environmental science missions. The Palmdale facility is also the base of operations for the Stratospheric Observatory for Infrared Astronomy (SOFIA).

- 541712—Research and Development in the Physical, Engineering, and Life Sciences (Except Biotechnology)
- 488190—Other Support Activities for Air Transportation
- 541513—Computer Facilities Management Services
- 541330—Engineering Services
- 238220—Plumbing, Heating and Air-Conditioning Contractors
- 561210—Facilities Support Services
- 561110—Office Administrative Services
- 336413—Other Aircraft Parts and Auxiliary Equipment Manufacturing
- 237120—Oil and Gas Pipeline and Related Structures Construction
- 561612—Security Guards and Patrol Services

The second of three missions as part of NASA’s Antarctica Long Duration Balloon Flight Campaign was successfully launched Dec. 2, 2016. (NASA)
GLENN RESEARCH CENTER

Glenn Research Center (GRC) at Lewis Field in Cleveland, OH, develops critical space flight systems and technologies to advance the exploration of our solar system and beyond while continuing to maintain leadership in aeronautics. In partnership with U.S. industries, universities, and other Government institutions, the Center’s Research and development efforts focus on advancements in propulsion, power, communications, nuclear technology, and human related aerospace systems.

GODDARD SPACE FLIGHT CENTER

Goddard Space Flight Center (GSFC) is located in Greenbelt, MD, with the mission to expand knowledge of Earth and its environment, the solar system, and the universe through observation from space. To ensure that our Nation maintains leadership in this endeavor, we are committed to excellence in scientific investigation, in the development and operation of space systems, and in the advancement of essential technologies. GSFC is also the contracting office for NASA Headquarters (HQ) in Washington, DC. The list of NAICS codes below is the combined list of requirements for both GSFC and Headquarters.

Total FY16 Prime Dollars Obligated (GSFC and HQ): $2,977,831,865

- 334511—Search, Detection, Navigation, Guidance, Aeronautical, and Nautical System and Instrument Manufacturing
- 517919—All Other Telecommunications
- 541614—Process, Physical Distribution, and Logistics Consulting Services
- 333314—Optical Instrument and Lens Manufacturing
- 561210—Facilities Support Services
- 336419—Other Guided Missile and Space Vehicle Parts and Auxiliary Equipment Manufacturing
- 541611—Administrative Management and General Management Consulting Services
The Jet Propulsion Laboratory (JPL) is a division of the California Institute of Technology (Caltech) and a Federally Funded Research and Development (FFRDC). Located at the base of the foothills near Pasadena, CA, JPL is responsible for robotic exploration of the solar system. The Laboratory occupies 177 acres and employs 5,500 people with an approximate budget of $1.8B. JPL has a wide-ranging charter for Earth science research, space exploration, astronomy, physics, and telecommunications. The Laboratory has received numerous small business utilization awards, including the prestigious U.S. Small Business Administrations’ Dwight D. Eisenhower Award of Excellence in the Research and Development category.

JOHNSON SPACE CENTER

Johnson Space Center (JSC), located in Houston, TX, provides leadership for human space exploration and operations. JSC strives to advance human capability for exploration and utilization of space by conducting space operations and by designing, testing, and developing space flight hardware and systems. JSC has the responsibility for the operation of the International Space Station. Additionally, the Center hosts the Commercial Cargo Project, which will foster increased commercial space enterprise opportunities.

KENNEDY SPACE CENTER

Kennedy Space Center (KSC) will transform from a Government- and program-focused, single-user launch complex to a more capability-centric and cost-effective multiuser spaceport, enabling both Government and commercial space providers. KSC’s future is the launch services, commercial crew, and exploration programs. The 21st Century Ground Systems Program will align the KSC infrastructure to support the future needs of these programs to process and launch Government and commercially provided vehicles and spacecraft. KSC will play a key role in solving technical problems, processing payloads and hardware for future missions, and diversifying partnerships that will utilize existing capabilities.

MARSHALL SPACE
FLIGHT CENTER

Marshall Space Flight Center (MSFC), located in Huntsville, AL, serves as a systems developer and integrator for exploration and science missions. It advances Agency priorities with its full life-cycle engineering capabilities, developing and integrating human and scientific space flight systems from concept to development to operation. MSFC’s work in advanced materials and manufacturing processes and its scientific research in specialized areas round out its portfolio.

NASA SHARED SERVICES CENTER

The NASA Shared Services Center (NSSC), located at Stennis Space Center, serves as a major Agency-wide service resource that provides timely, accurate, high-quality, cost-effective, and customer-focused services for NASA. The Center is a value-added, independent resource for NASA’s information technology, financial management, procurement, and human resources communities. By achieving synergy within and across functions, the NSSC increases operational efficiency, reduces resource requirements for institutional support areas, and positions NASA for further business process improvements and innovations.

STENNIS SPACE CENTER

Stennis Space Center (SSC), located in Stennis, MS, implements NASA’s mission in areas assigned by two Agency Mission Directorates. SSC manages rocket propulsion testing for the Human Exploration and Operations Mission Directorate (HEOMD) and is serving as the Systems Engineering Center, managing assigned applied sciences program activities for the Science Mission Directorate (SMD). Stennis also serves as Federal manager and host agency of a major Government multiagency center.
